<u>Report on Online Pharmacy Store</u>

We made a **Database schema** called ops and added information to the tables: We made 8 SQL tables including Customer, Doctor, Supplier, Employee, Invoice, Medicine, Pharmacy, and Login with their attributes.

Additional **Integrity Constraints** were also assigned:

In the necessary tables, primary and foreign keys were added.

Additionally, we have

Customer is referenced via the FOREIGN KEY (CID).

Doctor is referenced via the FOREIGN KEY (docID).

Medicine is referenced via the FOREIGN KEY (medID).

Data Population:

With the use of web tools, we collected data and using SQL INSERT INTO and select commands, we added roughly 100 entries to each table.
